**DETAILED ACTION**

***Response to Arguments***

1. Applicant's arguments, see Remarks on pages 7-11, filed on July 31, 2006 have been fully considered and are persuasive. The rejection has been withdrawn.

***Allowable Subject Matter***

2. Claims 1-12 and 14-31 allowed and re-numbered to 1-29.

3. The following is an examiner's statement of reasons for allowance:

The instant invention defines a method of extracting desired features from a cellular image using a plurality of agents starting from one or more starting points as disclosed in claim 1 and computer system, program product in claims 30-31. The claimed invention distinguishes over the prior art by the manner in which the electronic pheromone is associated. The claimed combination allows for improving a method of extracting desired features from a cellular image using a plurality of agents starting from one or more starting points.

This type of method is conventional in the art. However, the prior art of record fails to teach selecting an initial cell within said image; selecting an additional cell, near said initial cell, appearing to be associated with a desired feature; repeating selecting an additional cell step for further cells, near at least one of said previously selected cells, appearing to be associated with said feature, until selection termination criteria are satisfied; and repeating steps of selecting an initial cell, an additional steps and further cells for other initial cells; wherein selection of a cell in step of selecting an additional cell updates an "electronic pheromone" value associated with said cell, wherein said electronic pheromone is associated with one or more of said plurality of agents. These elements in combination with all of the other elements of the claims are not taught or fairly suggested in the prior art of record. The dependent claims 2-12 and 15-29 are allowed for the same reasons.
